Professional Summary

MCA student (Batch 2025–27, Dept. of Computer Applications, Saintgits College of Engineering, Kottayam) with a foundation in Java, Python, and full-stack web development. Completed a live-project internship at Inspite Technologies Pvt. Ltd., contributing to backend features for nclips.ai, an AI-powered application that helps nursing students prepare for the NCLEX exam. Built projects including CampusCare, a campus issue-reporting platform, and a deep learning-based face emotion detection system. Familiar with JSP/Servlets, Django, MySQL, Firebase, and AWS EC2. Have foundational knowledge of machine learning and deep learning, and a basic understanding of REST APIs. Seeking an internship or entry-level role in full-stack, backend, or AI-based software development.

Education

Master of Computer Applications — 2025 – 2027 (Pursuing)
Saintgits College of Engineering, Kottayam — CGPA: 8.34

Bachelor of Computer Applications — 2025
St. Berchmans College, Changanassery — CGPA: 6.75 / 10

Higher Secondary (Biology Science) — 2022
St. Mary's Higher Secondary School, Champakulam — 88%

Secondary School Leaving Certificate (High School) — 2020
St. Mary's Higher Secondary School, Champakulam — 88%

Skills

- **Languages:** Java, Python
- **Web & Frameworks:** HTML, CSS, JavaScript, Django, JSP, Servlets
- **Development Focus:** Full-Stack Development, Backend Development, REST API Integration, Mobile Application Development
- **Database:** MySQL, SQLite, Supabase, SQL
- **Tools & Technologies:** Git, GitHub, Android Studio, VS Code, NetBeans, Firebase, AWS (EC2), PyCharm
- **Core Concepts:** OOP Concepts, Machine Learning, Deep Learning, Problem-Solving
- **Spoken Languages:** English, Malayalam

Projects

CampusCare — Smart Campus Issue Reporting System github.com/aibinjmca2527-dotcom/CampusCare
Designed and deployed a full-stack campus issue-reporting and management system with role-based access for students and admins, where admins assign reported issues to technicians. Built with JSP, Java Servlets, MySQL, and Apache Tomcat, and deployed to AWS EC2.

Tom's Remote — Native Android IR Fan Remote github.com/aibinjmca2527-dotcom/Fan-Remote-App
Built a native Android infrared remote app for BLDC ceiling fans in pure Java, transmitting NEC 38 kHz signals through ConsumerIrManager. Features a custom Canvas dial, Google Assistant voice commands, an in-app GitHub auto-updater, and an ESP8266 IR-capture tool.

Deep Learning Face Emotion Detection
Built a facial emotion recognition system using a convolutional neural network that classifies emotions from uploaded images, applying deep learning and computer vision for face detection and prediction. Built with Python, OpenCV, TensorFlow/Keras.

Experience

Live Project Intern — Inspite Technologies Pvt. Limited **18 May – 3 Jul 2026**

- Contributed to the backend workflow of nclips.ai, an AI-powered learning application for nursing students preparing for the NCLEX exam, during a 45-day internship.
- Worked on the AI video-generation pipeline, including generating images, voiceovers, and video content from learning notes using different AI models.
- Monitored the content-generation process, identified and handled generation errors, and helped process the final videos for integration into the main application.
- Suggested and contributed to backend workflow improvements to enhance development speed, efficiency, and functionality for the development team.
- Served as a team lead, coordinating teammates by dividing tasks, monitoring progress, and ensuring assigned work was completed effectively.

Certifications

- Computer Hardware (Practical Training)
- Flutter Basics
